

Microsoft Power BI Data Analyst (PL-300)

 PL-300 Final Quiz (Multiple Choice)**1. Which of the following best describes the role of a Power BI data model?**

- A. It stores raw data only
- B. It defines relationships, calculations, and measures used for analysis
- C. It handles user authentication and security
- D. It performs data extraction only

 **Answer: B**

2. In Power Query, which transformation happens *after* loading the data into the model?

- A. Applied Steps
- B. Model relationships
- C. Query folding
- D. Data profiling

 **Answer: B**

3. What is the *main purpose* of Query Folding in Power Query?

- A. To compress data after load
- B. To push transformations back to the data source for performance
- C. To combine multiple tables in memory
- D. To cache the query results locally

 **Answer: B**

4. Which DAX function is used to create calculated columns rather than measures?

- A. CALCULATE()
- B. SUMX()
- C. RELATED()
- D. ALL()

 **Answer: C**

5. When should you prefer a *measure* instead of a *calculated column*?

- A. When you need to perform row-by-row evaluation
- B. When you want the result stored in the model
- C. When you need dynamic aggregation based on user filters
- D. When you need to define relationships

 **Answer: C**

6. Which visualization type is best for showing categorical comparison of a single metric?

- A. Line chart
- B. Stacked bar chart
- C. Scatter chart
- D. Waterfall chart

 **Answer: B**

7. What does the Manage Roles feature in Power BI Desktop allow you to do?

- A. Define report permissions
- B. Define row-level security (RLS) rules
- C. Assign workspaces
- D. Publish datasets

 **Answer: B**

8. In Power BI Service, a workspace primarily serves as:

- A. A personal data storage
- B. A collaboration and deployment container for datasets, reports, and dashboards
- C. A dataset scheduling system
- D. A temporary sandbox

 **Answer: B**

9. What is the main purpose of the Gateway in Power BI?

- A. To enable local printing
- B. To connect on-premises data sources to the Power BI Service
- C. To host embedded reports
- D. To manage user roles

 **Answer: B**

10. Which of the following data refresh types requires a Power BI Gateway?

- A. DirectQuery
- B. Import from SQL Server on-premises
- C. Web connector to a public API
- D. Dataverse cloud connection

 **Answer: B**

11. What feature allows users to *ask questions in natural language* within Power BI?

- A. Quick Insights
- B. Q&A Visual
- C. Smart Narrative
- D. Explain the Increase

 **Answer: B**

12. What does the Performance Analyzer in Power BI help identify?

- A. Dataset version history
- B. Visual load times and query bottlenecks
- C. Data source authentication issues
- D. Data refresh schedule conflicts

 **Answer: B**

13. Which DAX function removes filters from all columns in a table?

- A. REMOVEFILTERS()
- B. CLEARFILTERS()
- C. ALL()
- D. FILTER()

 **Answer: C**

14. What's the main difference between DirectQuery and Import mode?

- A. DirectQuery stores data in the model
- B. Import always requires a gateway
- C. DirectQuery fetches live data at query time
- D. Import mode can't create relationships

 **Answer: C**

15. Which action helps ensure governance and reusability of Power BI assets?

- A. Saving PBIX files locally
- B. Publishing reports to personal workspaces
- C. Promoting certified datasets in the Power BI Service
- D. Allowing all users to edit reports directly

 **Answer: C**

👍 Here's your **PL-300 Final Quiz – Answer Key**

 PL-300 Final Quiz – Answer Key

#	Question Topic	Correct Answer	Explanation
1	Power BI Data Model	B	The model defines relationships, measures, and calculated logic for analysis.
2	Power Query vs. Model	B	Once loaded, modeling steps (relationships, hierarchies) occur after Power Query transforms.
3	Query Folding	B	Folding pushes transformation logic back to the data source for better performance.
4	DAX Columns	C	RELATED() brings in data from related tables — typical for calculated columns.
5	Measures vs Columns	C	Measures calculate at query time and respond to filters dynamically.
6	Visualization Choice	B	A stacked or clustered bar chart best compares categories by a metric.
7	Security	B	Manage Roles is used to define and test Row-Level Security (RLS).
8	Workspaces	B	Workspaces host datasets, reports, dashboards, and manage access collaboration.
9	Gateway Purpose	B	The gateway connects cloud Power BI to on-premises data sources securely.
10	Refresh Type	B	On-prem SQL data requires a gateway for refresh in Import mode.
11	Natural Language	B	Q&A visual allows typing natural language questions about your data.
12	Performance Analyzer	B	Identifies which visuals or queries take the most load time.
13	DAX Filtering	C	ALL() removes filters from a table or column for context-free calculation.
14	Import vs DirectQuery	C	DirectQuery fetches live data with each visual interaction.

#	Question Topic	Correct Answer	Explanation
15	Governance	C	Certified datasets provide trusted, reusable data for organizational governance.
